HOW TO USE THIS BOOK

Like all of the other Books of Random Tables, The Book of Random Tables: Ancient World was created to help gamemasters cut down their prep time. These random tables are geared to help GMs fill in details as they are running sessions of a mythic role-playing game or games set in the ancient world.

These tables can be used during, before, or after a session to add flavor that is otherwise difficult to provide. It is recommended that a GM use these tables during a session, so there is no need to spend time before the session.

While names from different ancient cultures are included, the random tables of items mainly focus on the Greek culture. The Greek or the Homeric era is a popular setting for RPGs.

First you will find the section of Items & Things. Role-players want to search every room, closet, jar, and whatever else they come across. These tables let you roll for details without telling your players there is nothing in the room or spending time in preparation.

Next is a table of battlefield encounters and items. Again, a table like this adds details to a session without the need for preparation beforehand.

Then there is a table of Rumors and Odd Jobs. Tables like these can be the gamemaster's best friend. If you need an idea or you need to feed your players story hooks, here they are ready to go.

Then come the names. Names are always frustrating. Players want to know every NPC's name. Having a list at hand is a lifesaver. Plus when was the last time you had an ancient Egyptian name on the tip of your tongue?

The last two sections provide jobs for NPCs and lists of deities for several different ancient cultures.

It is my certain hope that tables will augment your RPG sessions and enhance the experience for you and your players. Now, have fun and write your own myths.
